

Project Proposal Template

1. Project Title

LMS-Aware AI Copilot for Personalized Learning

2. Project Objectives

Main Objectives: Build an AI-powered assistant that personalizes the user's study process by integrating with LMS (e-Class) data.

- **Objective 1: (Front End):** Implement a seamless Chrome Extension Sidebar that overlays on e-Class pages without disrupting the user's view.
- **Objective 2: (Back End):** Build an integrated system for LMS data scraping (Session-based) and a centralized database for course materials and personal logs.
- **Objective 3 (Back End2):** Develop a Multi-Document RAG engine to deliver hyper-personalized feedback and Q&A based on course materials (PDFs, PPTs) and lecture logs retrieved from the LMS.

3. Related / Similar Work

- HUFS e-Class: The target platform for integration.
- ChatPDF / Humata.ai: PDF-based Q&A services (No LMS context).
- Notion AI: General workspace assistant (No real-time school data sync).

4. Team Members and Roles

- *(List all team members and mention the Roles)*

Name	Role
[배진형] (202501718)	Project Leader, LMS Scraper, Database & API Server
[신현지] (202304389)	Front End, Extension UI/UX & DOM Manipulation
[긴 소파랏] (202530252)	Back End2, AI Algorithm & RAG System Architecture
[Name 4] (Student ID)	Algorithm + Presentation
